For Live Tracking on an app using data rather than text

Munster GPS recommends using the SMS tracking method on page 1. The live tracking instructions listed below have been tested and work well but the server that uploads the information to the app is held by a third party which we have no control of so cannot guarantee.

However if you are familiar with technology and would like to try the live tracking go ahead as you can always go back to the SMS method. One thing to note though are the charges for using data when live tracking. Check your SIM provider for more detail on this.

1. Download TKSTAR GPS app
2. Select on screen **log in by IMEI**
3. Server: Select **2.tkstargps.net**
4. Type the IMEI which is located on the back of the tracker
5. Password **123456**
6. Set up your phone as the administrator by texting the tracker **admin123456 0876669186** replace 0876669186 with your own phone number.
7. Send text to tracker **sleep123456 shock**
This will place the tracker in sleep mode until tracker is moved to save battery.
8. Send text **gprs123456** and you will receive text back **gprs ok**
9. Set new APN for your provider. Example for vodafone send text **apn123456 isp.vodafone.ie** and you will receive a text back **apn ok**
10. Follow the app instructions
